When you're not working with a direct connection to a computer, Photoshop can live within the cloud. That means you don't have to be plugged right into the Internet to edit your art projects. In fact, you don't even have to be on the same network as the one your computer is connected to. Photoshop CS6 is in every way the best version of Apple's popular photo editing software. The program sports a lot of new features, such as the ability to make live edits directly in the editing window (using a specific feature called "Time-lapse"), facial recognition in portraits - great for removing the portraits of people who don't want to look at themselves in the images you generate, and many improvements in the interface.
